

ABSTRACT OF THE DISCLOSURE

A recording disc stores audio data, and management data. The management data include original management data and user defined management data. The original management data enable
5 the audio data to be reproduced in a recording order. The user defined management data include cell information pieces related to respective cells. The cells correspond to a reproduction unit and are related to the audio data. The user defined management data represent a user defined track which includes at least one of the
10 cells and which is decided in response to the cell information pieces according to user's instruction. The user defined track designates portions of the audio data which correspond to the at least one cell in the user defined track. The user defined track represents a reproduction order decided by user's instruction. The
15 user defined management data enable the designated portions of the audio to be reproduced in the reproduction order.
